

U.S. Customs and Border Protection

Coastal Enforcement Class 30-Foot Intrepid

FACT SHEET

The Coastal Enforcement Class vessels serve as a multi-purpose law enforcement vessel. The 30-foot Intrepid best fulfills this multi-mission requirement. The hull design makes it ideal for enforcement operations in shallow, inland and near coastal waters. The Intrepid can also be utilized for both covert and overt missions. The typical open fisherman type configuration allows the law enforcement crew to covertly survey illegal activity. The vessel's shallow draft allows its two member (minimum) crew to pursue smugglers who offload contraband in remote and shallow regions. The starboard-side dive door allows for easy pick-up of floating contraband.

The Intrepid meets the demands for a small, fast, highly maneuverable vessel that can be used to interdict, patrol, conduct surveillance and port security activities that are the missions of CBP's Office of Air and Marine (OAM).

Its versatility allows OAM to provide DHS, DOD, and other law enforcement agencies, viable and effective maritime law enforcement support.

Performance and Weights:

Speed	50 knots
Range	200 NM
Endurance	4-6 hours
Length	30 feet
Max Gross Weight	9,500 lbs.

Features:

- Marine Surface Radar
- Global Positioning Satellite
- 2 X 275 hp Mercury Outboard Engines
